

# Pteranodon

Pteranodons grew up to 7m in size. They weren't dinosaurs, but flying reptiles that lived at the same time.

## To make the finger puppet

- Cut out
- Colour in on both sides
- Fold along the dotted lines
- Cut along the solid lines across its body and push the band downwards
- Glue or tape the head on using the neck tab
- Put a finger through the belly band and make it soar!

Why can't you hear a Pteranodon in the toilet?  
Because the P is silent!

New research has shown that some Pterosaurs were brown or gingery – but maybe others were brightly coloured.

What colours will yours be?
